

Property Appraisal Report

Prepared: June 01, 2026 | Query Index: 18216 | Confidence: High

Estimated Value	Actual Price	Delta	Model Used
\$614,617	\$609,990	\$4,627	Multiple Regression, Ridge Reg

Executive Summary

The estimated value is calculated using multiple regression models based on provided features. The global prediction is closest to the Linear Regression model's prediction.

Comparable Sales

#	Price	Location (km)	Influence	Reason
C1	\$549,000	0.16	57.4%	Close location distance and similar features, with a slight negative impact on square footage

Comp Analysis

Price Drivers

Positive None	Negative Square Footage
------------------	----------------------------

Model Outputs

Model	Prediction
Global	\$614,617
Linear Regression	\$584,202
Ridge Regression	\$611,936
Random Forest	\$585,515
XGBoost Local	\$559,990

Model Selection Rationale

The Linear Regression model provided the closest prediction to the actual price and had a higher R-squared value.

Valuation Logic

The valuation logic uses a combination of statistical and machine learning techniques to estimate property values based on various factors such as square footage, number of bedrooms, location distance, and feature similarity.

Confidence Breakdown

Comp Quality		Model Agreement	Overall Risk
Good	High (all models are in agreement within 10% of the global prediction)		

Final Takeaway

The estimated value is close to the actual price with high confidence, indicating a good property valuation.
