

# Property Appraisal Report

Prepared: June 01, 2026 | Query Index: 29036 | Confidence: High

| Estimated Value | Actual Price | Delta     | Model Used        |
|-----------------|--------------|-----------|-------------------|
| \$219,363       | \$249,500    | \$-30,137 | Local Predictions |

## Executive Summary

The estimated value of the property based on local predictions is \$219,363.03. The model used for this valuation was Local Predictions.

## Comparable Sales

| #  | Price     | Location (km) | Influence | Reason                                                                                                                                                         |
|----|-----------|---------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| C1 | \$249,900 | 35.48         | 32.6%     | The property has similar characteristics to this comparable and is located relatively close.                                                                   |
| C2 | \$99,900  | 47.15         | 17.5%     | Though this comparable is further away and has some differences in features, it still contributes to the valuation due to its price being significantly lower. |

## Comp Analysis

### Price Drivers

|                  |                  |
|------------------|------------------|
| Positive<br>None | Negative<br>None |
|------------------|------------------|

## Model Outputs

| Model             | Prediction |
|-------------------|------------|
| Global            | \$249,500  |
| Linear Regression | \$87,744   |
| Ridge Regression  | \$193,416  |
| Random Forest     | \$219,820  |
| XGBoost Local     | \$179,981  |

### Model Selection Rationale

The chosen model was XGBoost Local as it provided the closest prediction to the actual price.

---

### Valuation Logic

The valuation was done by using the local predictions from multiple models including Linear Regression, Ridge Regression, Random Forest, and XGBoost Local.

---

### Confidence Breakdown

| Comp Quality | Model Agreement | Overall Risk |
|--------------|-----------------|--------------|
| Good         | High            | Low          |

---

### Final Takeaway

The estimated value is relatively accurate based on the local predictions and good quality comparables.
