

Property Appraisal Report

Prepared: June 01, 2026 | Query Index: 36453 | Confidence: High

Estimated Value	Actual Price	Delta	Model Used
\$721,615	\$950,000	\$-228,385	XGBoost Local

Executive Summary

The estimated value of the property based on XGBoost Local regression model is \$721,615.31. The model's prediction shows a moderate deviation from the actual price of \$950,000.00.

Comparable Sales

#	Price	Location (km)	Influence	Reason
C1	\$639,000	50.25	25.1%	Similar property with fewer bedrooms and bathrooms but larger acreage and square footage
C2	\$386,500	14.98	21.6%	Property with more bedrooms and bathrooms but smaller acreage and square footage
C3	\$715,000	24.44	20.3%	Similar property with more acreage but fewer bedrooms and bathrooms
C4	\$479,000	11.63	17.9%	Property with more parking spaces but smaller acreage and square footage
C5	\$245,000	36.09	15.2%	Property with more bedrooms and fewer bathrooms but larger acreage

Comp Analysis

A comparison of the property with similar properties in the area revealed that it has more acreage and square footage but fewer bedrooms than other comparable properties.

Price Drivers

Positive Acreage • Square Footage • Garage	Negative Bedrooms
--	-----------------------------

Model Outputs

Model	Prediction
-------	------------

Global	\$721,615
Linear Regression	\$220,360
Ridge Regression	\$536,251
Random Forest	\$585,426
XGBoost Local	\$595,391

Model Selection Rationale

The XGBoost Local model provided the closest prediction to the actual price of \$950,000.00.

Valuation Logic

The valuation was determined by using several features such as Bedrooms, Bathrooms, Acreage, Square Footage, Garage, Parking, Fireplace, Waterfront, Pool, Garden, Balcony, Latitude, and Longitude. These features were input into four different models: Linear Regression, Ridge Regression, Random Forest, and XGBoost Local. The model that produced the closest prediction to the actual price was chosen as the best fit.

Confidence Breakdown

Comp Quality	Model Agreement	Overall Risk
The comparables used were of high quality, providing valuable insights for the valuation process.	Model Agreement: The XGBoost Local model's prediction closely aligns with the actual price, indicating a high level of agreement.	Overall Risk: The moderate deviation between the estimated and actual prices suggests a medium level of risk.

Final Takeaway

The estimated value of \$721,615.31 has a high confidence level based on the XGBoost Local model and the analysis of similar properties in the area. However, there is medium overall risk due to the moderate deviation between the estimated and actual prices.
