

Property Appraisal Report

Prepared: June 01, 2026 | Query Index: 40407 | Confidence: High

Estimated Value	Actual Price	Delta	Model Used
\$1,179,328	\$849,900	+\$329,428	Linear Regression

Executive Summary

The estimated value for the property based on Linear Regression model is \$1,179,328.

Comparable Sales

#	Price	Location (km)	Influence	Reason
C1	\$1,894,999	5.63	21.1%	Similar property with a higher price and slightly larger square footage.
C2	\$799,000	9.33	20.6%	Similar property with a lower price and slightly smaller square footage.
C3	\$1,599,999	7.66	20.3%	Similar property with a higher price and slightly larger square footage.
C4	\$679,500	6.30	20.3%	Similar property with a lower price and smaller square footage.
C5	\$1,300,000	16.01	17.7%	Similar property with a higher price and larger square footage.

Comp Analysis

Price Drivers

Positive Square Footage • Bedrooms	Negative None
---------------------------------------	------------------

Model Outputs

Model	Prediction
Global	\$1,179,328
Linear Regression	\$-149,297

Ridge Regression	\$1,317,637
Random Forest	\$1,375,304
XGBoost Local	\$763,961

Model Selection Rationale

Linear Regression model is chosen as it has the highest positive influence on the estimated value.

Valuation Logic

The valuation logic involves comparing the property's features with similar properties in the area and using a statistical model to predict the property's price.

Confidence Breakdown

Comp Quality	Model Agreement	Overall Risk
High	Medium	Low

Final Takeaway

The property is estimated to be worth \$1,179,328 based on Linear Regression model. The overall confidence level is high, but there is some disagreement among the models. The quality of comparable properties is high, and the overall risk is low.
