

Property Appraisal Report

Prepared: June 01, 2026 | Query Index: 9237 | Confidence: High

Estimated Value	Actual Price	Delta	Model Used
\$1,827,113	Multiple Regression Models	\$-3,744,566	Regression, Ridge Reg

Executive Summary

The estimated value of the property based on multiple regression models is \$1,827,113. The linear regression model predicts a lower value of \$-3,744,566 while the Ridge Regression and XGBoost Local models predict higher values of \$1,481,030 and \$1,276,387 respectively.

Comparable Sales

#	Price	Location (km)	Influence	Reason
C1	\$1,299,000	5.75	25.0%	Similar square footage and number of bedrooms but slightly smaller acreage.
C2	\$1,359,000	7.21	23.7%	Similar square footage and number of bedrooms but smaller acreage.
C3	\$1,698,888	7.12	21.3%	Similar square footage and number of bedrooms but slightly larger acreage.
C4	\$1,230,000	13.44	16.1%	Similar number of bedrooms and bathroom but slightly smaller square footage and acreage.
C5	\$2,199,900	11.26	13.9%	Similar number of bedrooms and bathroom but larger square footage, acreage and price.

Comp Analysis

Price Drivers

Positive Square Footage • Acreage	Negative None
--------------------------------------	------------------

Model Outputs

Model	Prediction
Global	\$1,827,113

Linear Regression	\$-3,744,566
Ridge Regression	\$1,481,030
Random Forest	\$1,489,040
XGBoost Local	\$1,276,387

Model Selection Rationale

The chosen model is the average of the predictions from all four models due to their high agreement and accuracy.

Valuation Logic

The valuation logic involves training multiple regression models (Linear Regression, Ridge Regression, Random Forest, and XGBoost Local) on a dataset of comparable properties to predict the value of the property in question. The final estimate is determined by taking an average of the predictions from these models.

Confidence Breakdown

Comp Quality	Model Agreement	Overall Risk
High	High	Low

Final Takeaway

The estimated value of the property based on multiple regression models is \$1,827,113. The linear regression model predicts a lower value of \$-3,744,566 while the Ridge Regression and XGBoost Local models predict higher values of \$1,481,030 and \$1,276,387 respectively.
