

Property Appraisal Report

Prepared: May 31, 2026 | Query Index: 25733 | Confidence: High

Estimated Value	Actual Price	Delta	Model Used
\$7,136,979	\$2,900,000	\$4,236,979	Multiple Regression, Ridge Regr

Executive Summary

The estimated property value is \$7,136,979 based on multiple regression models. The local predictions show that Linear Regression, Ridge Regression, and XGBoost Local predict higher values compared to the actual price, while Random Forest predicts a lower value.

Comparable Sales

#	Price	Location (km)	Influence	Reason
C1	\$10,998,000	2.45	27.7%	Higher bedrooms and bathrooms count, similar square footage
C2	\$5,880,000	0.06	20.3%	Similar bedrooms and bathrooms count, slightly larger square footage
C3	\$1,790,000	17.82	18.1%	Similar bedrooms and bathrooms count, larger acreage and square footage
C4	\$7,688,000	14.34	18.0%	Similar bedrooms and bathrooms count, smaller square footage
C5	\$1,995,000	7.73	16.0%	Similar bedrooms count, larger acreage and square footage

Comp Analysis

Similar properties have higher prices, with differences in square footage, acreage, and bedrooms count.

Price Drivers

Positive Bedrooms • Fireplace	Negative None
----------------------------------	------------------

Model Outputs

Model	Prediction
-------	------------

Global	\$7,136,979
Linear Regression	\$7,073,331
Ridge Regression	\$6,074,550
Random Forest	\$5,539,798
XGBoost Local	\$1,936,633

Model Selection Rationale

Linear Regression has the highest global prediction accuracy and a closer prediction to the actual price compared to other models.

Valuation Logic

The valuation is based on the property's features such as bedrooms, bathrooms, acreage, square footage, fireplace, and location. The closer the distances of similar properties, the higher their influence weight in the model.

Confidence Breakdown

Comp Quality	Model Agreement	Overall Risk
High	Medium	Low

Final Takeaway

Based on the model analysis and similar properties, there is a high confidence in the estimated property value of \$7,136,979. However, overall risk is low due to moderate agreement among models and high-quality comparable properties.
